

# Alabaster slices

Alabaster pieces specially designed to optimize subsequent manufacturing.

At Arastone Alabaster, we offer several types of alabaster, specifically quarried for different commercial and artistic uses.

We currently offer two exclusive alabaster varieties:

**ZAIDA** It stands out for its exceptional snow-white translucency, with reddish earth-toned veining and subtle cloudy textures.

**EBURO** Recognized for its milky translucency and veining in earth and greyish tones.

We supply alabaster in slices because it is the most suitable format for further processing, enabling more efficient production across a range of products.
